

Terminal-block give-back: hollow = grid A (discovery), filled = grid B (confirmation)

Registered outcome: E5 WEAKEN 8/12 — every evaluable grid-B cell but one shows the dip ( $p_{grid}=0.0005$ ), yet the frozen bar of  $\geq 10/12$  plus family bars was NOT met. Shaded band = pooled grid-B dip CI [0.123, 0.201]. Grid-A values are the cross-fitted rescore, not the registered grid-A E4 boolean.
