

Cliff onset — DISCOVERY ONLY (E6 was NOT TESTED)

Grid A only. E6 was gatekept behind an E5 CONFIRM that did not occur, so no cliff endpoint was ever evaluated; these carry no confirmatory status.

Excluded: halueval / Llama-3.3-70B, whose $J = 0.0000$ is a structural empty-window fallback ($l^*=26$ below the search floor), not a measured absence of a jump.
